

Description

OptiWatch Software v2.0 automates connectivity, work order creation and documentation to speed up Moves, Adds, and Changes while creating an accurate real-time database of your data center infrastructure. The OptiWatch system does not interfere with any connectivity within the data center and all tracking and reporting is completely separate from your infrastructure. Minimize downtime while keeping an accurate database of your data center's connected ports.

Operating System

Windows 2000
Windows XP

Manage These Intelligent Products

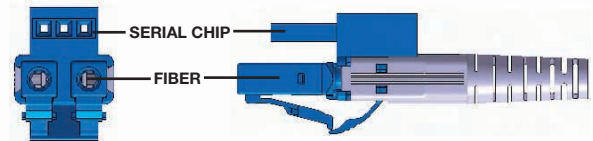

- Patch Panels

- Cabinet Controller

- Intelligent Trunks and Jumpers

OptiWatch uses a serial chip on the end of each patch cord and each channel of a trunk to determine which ports are connected.

Features & Benefits

- Real time Monitoring of your data center infrastructure
- **Automatically Create Panels** - Patch Panels can be created by simply clicking on a window.
- **Port Labels** - OptiWatch will assign port labels for easy recognition
- **Easily Track your Moves, Adds and Changes** movement of Patch Cords and trunks can be tracked using OptiWatch
- **Work Order Creation** - This function allows for the dynamic automation of moves, adds and changes.
- **Reports** - Run and archive reports on every connection in your data center.
