

Multi-Bay

Description

The Multi-Bay is a series of open frame racks with vertical cable management between them and horizontal management above and below. The Multi-Bay is primarily used as the Central Area Patching Facility in a structured cabling environment within the data center. With fully lockable accordion style doors in many style options, the Multi-bay can be completely open for patching move, adds and changes without any obstacles between racks. As the data center grows, more bays can be easily added.

Features and Benefits

The DCS Multi-Bay allows for ease of patching and cable management. With disciplined patching standards the DCS Multi-Bay will keep an organized Central Patching Location well into the future.

- Unlimited number of racks
- Vertical managers in 6", 8" or 12" widths
- Slack managers on vertical managers
- 40 units of rack space per rack availability
- Top and bottom horizontal cable management
- Available in single row or back to back
- Available in Black or ECO/Silver
- Many options for accordion doors
- Optional front to back pass-through
