

9U 11 SLOT MODULAR CASSETTES

DESCRIPTION

The DCS 9U 11 Modular Slot Cassettes are used to populate the 9U 11 slot Modular Patch Panel Enclosure. These cassettes are manufactured to the highest of standards using ribbon assemblies in a fully protected enclosure. The 9U cassette can be used in many applications, yet it was specifically designed to mimic today's 11 slot director class switches. Adding modular cassettes as you expand your network allows for port to port mirroring from the director class switch to the Central Area Patching Facility (CAP). Moves, adds, and changes become simple and stress free since each port on the patch panel matches exactly to the switch ports, from the slot location to the port number.

FEATURES / BENEFITS

- Color coded options to easily identify Fabrics or Fiber type
- Labeled to match director port labeling
- Snap on mounting for fast and easy installation and removal
- Compatible with either high density LC to LC coupler strips or cassettes for transitioning from MTP trunks to LC connections
- Industry leading insertion loss values for every port
- Every fiber and coupler is quality inspected and tested
- Serialized cassettes for greater management of ports and assets

SPECIFICATIONS

Dimensions: (H x W x D) 15.030" x 1.525" x .4.300"

- Aluminum Construction
- Durable fine textured powder coat finish
- Used to populate DCS 9U 11 Slot Modular Enclosures and Frames
- Modular adapter panels available in 24 or 48 channel
